

April, 2011

Stephanie Evans is one of my top teacher candidate graduating this spring semester from the University of Utah's elementary teacher licensure program. Stephanie is outstanding in every area of teaching! She has met all the program requirements with exceptional success. Stephanie is a professional and collaborative teacher educator and she will be a terrific asset to your faculty.

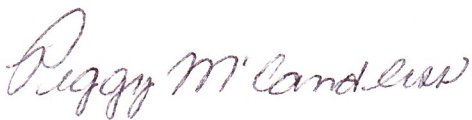

The elementary licensure program at the university is time intensive. Stephanie, unlike other teacher education programs, has experienced an entire year at the school. She has, first hand, experienced teacher-work-week in August. She has felt the importance of establishing an effective management plan at the very beginning of the year, and she knows how to fill out progress reports during the year, not to mention everything in between! Having student taught in a first grade classroom at Bonneville Elementary in Salt Lake City, Stephanie has had the opportunity to work with a school that integrates the fine arts.

Stephanie is professional in many ways. She attends to detail incredibly well, she plans hands-on, meaningful curriculum, and she attends professional development opportunities. Stephanie will be a life long learner.

I have had the pleasure of being Stephanie's university supervisor and I am most impressed with her unending talent and ability to be creative in her instructional approaches. Most recently, she began a unit on Now and Then. Her unit was well designed and she organized the content well. Her unit of study was well connected to the lives of her students and, during the lessons, her students were incredibly engaged.

If you want an incredibly talented, skilled, dependable teacher, hire Stephanie. She will be an extraordinary asset to any elementary faculty. She will share her creative ideas with others and she is willing to listen to others' advice. If you have any questions about Stephanie's qualification, please call me at, 801-971-7899.

Sincerely,

Peggy M'Candless
Elementary Coordinator
